Furthermore, once the step 3 is open on e-wulaas and the technical documents list available and drafted, they will be send for 30 days comment before submission to BOCMA together with comments and responses thereto.

		The WU licence 2/GAOG/AGTAE/10115 stipulated, amongst others, quality thresholds of wastewater to be disposed as well as that the wastewater be irrigated on 230.2ha of pastures / grazing. Your data will show that the wastewater quality does not comply with the conditions as per license, transgressing these thresholds by many orders of magnitude. You will also need to consider on what area wastewater is practically disposed in the light of continued crop framing practices on almost all fields available. From our perspective the tanker that disposes wastewater does not dispose wastewater over the 230.2ha of land as stipulated. Your client has now also installed a pivot that can only be used to irrigate wastewater and concentrating pollutants on a fraction of the area permitted. (This pivot is the subject of a communication currently being prepared to be submitted to BOCMA and the Departments of Agriculture and Environmental Affairs, the Department of Health, and other I&AP included previously). Previous soil quality data already indicated that the soils are saturated with nutrients (P, K and high levels of Na) and hence the license to use 230.2ha of land. All our efforts to create a win-win solution by liaising with the specialists used by Jarrahnap had been blocked by your client. We remain open for technical discussions to advance this matter.
